Solid Rigid Centralizer

- The solid rigid centralizer with high tensile and yield strengths is used in deviated or horizontal wells.
- The kinds of rigid centralizer is easy to install and then in order to tighten the casing by screws on the centralizer body,so you do not need stop collar again.
- Our solid rigid centralizer(we also call it solid body centralizer) body construction is steel or aluminum,the aluminum body is better in corrosion resistant than steel body.
- The solid rigid centralizers are available with straight or spiral blade,it is better to keep fluid flow through blade,straight blade for low density fluid,spiral blade for high density fluid.
- For spiral blade centralizer as a positive stand off tool,you can choose the left or right hand centralizer.
- There are three processed methods of solid rigid centralizer,one is casting,the second is integral punching and end welded by CO² shielded arc welding,the third is cutted by seamless pipe and the blade is processed by steel plate and then processed by lathe.
- Our solid rigid centralizer coating is powder baking or paint baking in the high temperature,but for aluminum body rigid centralizer,we do not need coating.
- The rigid centralizer sizes are from 4-1/2inch to 20inch,any special sizes are availalbe according to your requirement.

Left:Steel Body Solid Rigid Centralizer

Right:Aluminum Body Solid Rigid Centralizer
